

## **Facility For Rare Isotope Beams**

Hendrik Schatz

National Superconducting Cyclotron Laboratory

Department of Physics and Astronomy

Joint Institute for Nuclear Astrophysics

Michigan State University

# **This lecture**

- Motivation for FRIB: Why are rare isotopes important to study?
- How can one produce rare isotopes?
- How does FRIB do it?
- Some project details and status

#### **Next lectures:**

- Experiments with neutron rich isotopes
- Experiments with "proton rich" isotopes

## (Mostly motivated by astrophysics questions)

## Why Rare Isotopes: The Science Drivers for FRIB

- Nuclear Astrophysics: Understand the nuclear processes
   that occur in nature
  - Make the same nuclei that nature makes to understand
    - » The origin of the heavy elements and of radioactive nuclei in space
    - » Stellar explosions powered by rare isotopes
    - » Composition of neutron star crusts

#### Understand the atomic nucleus

- Find new phenomena (shapes, collective behavior, skins)
- Explore the limits of existence
- What makes matter stable?
  - » Towards a predictive theory for nuclei need isospin dependence
- Fundamental Symmetries: Use rare isotopes as optimized laboratories
  - Effects of symmetry violations are amplified in certain nuclei

#### Other Scientific Applications

- Stockpile stewardship, materials, medical, reactors

#### Nuclear processes in the cosmos

U.S. Department of Energy Office of Science National Science Foundation Michigan State University

## Neutron stars – wrapped in rare isotopes

U.S. Department of Energy Office of Science National Science Foundation Michigan State University

# **Drip line and shell structure**

#### Finding the drip line

- Fundamental question: which nuclei can exist?
- Neutron star crust models
- Sensitive probe of mass models and nuclear force furthest from stability

#### Identifying shell structure

- Defines "chemistry" of nuclei (therefore affects astrophysical processes)
- Sensitive probe of nuclear forces

U.S. Department of Energy Office of Science National Science Foundation Michigan State University

#### New Insight and Physics from Extreme Halos and Skins

<u>Science:</u> Pairing in low-density material, new tests of nuclear models, Interaction with continuum states - Reactions

# Step 1: Understand light nuclei in terms of NN interactions and connect to QCD

- Neutron rich nuclei were key in determining the isospin dependence of 3-body forces
- New data on exotic nuclei continues to lead to refinements in the interactions
- EFT developments are providing insight for *ab initio* theories, but they need grounding in data

#### Rare isotopes guiding theory role of 3 body forces

Ground state energies relative to <sup>40</sup>Ca from Theory and experiment

(Holt et al. 2012)

U.S. Department of Energy Office of Science National Science Foundation Michigan State University

## Tests of Nature's Fundamental Symmetries

- Angular correlations in β-decay and search for scalar currents
  - Mass scale for new particle comparable with LHC
  - $_{\circ}~^{6}\text{He}$  and  $^{18}\text{Ne}$  at 10^{12}/s
- Electric Dipole Moments
  - <sup>225</sup>Ac, <sup>223</sup>Rn, <sup>229</sup>Pa (30,000 more sensitive than <sup>199</sup>Hg; > 10<sup>9</sup>/s)
- Parity Non-Conservation in atoms
  - weak charge in the nucleus (francium isotopes; 10<sup>9</sup>/s)
- Unitarity of CKM matrix
  - $_{\circ}~~V_{ud}$  by super allowed Fermi decay
  - Probe the validity of nuclear corrections

U.S. Department of Energy Office of Science National Science Foundation Michigan State University

## **Rare Isotopes For Society**

- Isotopes for medical research
  - Examples: <sup>47</sup>Sc, <sup>62</sup>Zn, <sup>64</sup>Cu, <sup>67</sup>Cu, <sup>68</sup>Ge, <sup>149</sup>Tb, <sup>153</sup>Gd, <sup>168</sup>Ho, <sup>177</sup>Lu, <sup>188</sup>Re, <sup>211</sup>At, <sup>212</sup>Bi, <sup>213</sup>Bi, <sup>223</sup>Ra (DOE Isotope Workshop)
  - $\alpha$ -emitters <sup>149</sup>Tb, <sup>211</sup>At: potential treatment of metastatic cancer
- Reaction rates important for stockpile stewardship non-classified research
  - Determination of extremely high neutron fluxes by activation analysis
  - Rare isotope samples for (n, $\gamma$ ), (n,n'), (n,2n), (n,f) e.g. <sup>88,89</sup>Zr
    - » Same technique important for astrophysics
  - More difficult cases studied via surrogate reactions (d,p), (<sup>3</sup>He, $\alpha$  xn) ...
- Tracers for Geology, Condensed Matter (<sup>8</sup>Li), material studies, ...

#### Isotope harvesting is included in the FRIB scope

![](_page_10_Picture_11.jpeg)

# **Example: Targeted Cancer Therapy**

- Modern targeted therapies in medicine take advantage of knowledge of the biology of cancer and the specific biomolecules that are important in causing or maintaining the abnormal proliferation of cells
- These radionuclides have been relatively difficult to get in sufficient quantities<sup>1</sup>. The short-lived alpha emitters are particularly in demand, especially <sup>225</sup>Ac, <sup>213</sup>Bi, and <sup>211</sup>At.
- Pairs, e.g., <sup>67</sup>Cu (treatment) and <sup>64</sup>Cu (dosimetry) are particularly interesting
- FRIB can parasitically supply demand for many isotopes

# The Reach of FRIB

- FRIB is estimated to produce more than 1000 NEW isotopes at useful rates (4500 available for study; compared to 1900 now)
- Exciting prospects for study of nuclei along the drip line to A=120(compared to A=24)
- Production of most of the key nuclei for astrophysical modeling
- Theory is key to making the right measurements and interpreting them

![](_page_21_Figure_5.jpeg)

Rates are available at http://groups.nscl.msu.edu/frib/ rates/

![](_page_21_Picture_7.jpeg)

Sherrill NN2012 , Slide 22

# Fast, Stopped, and Reaccelerated Beams for Broad Science Opportunities

- Fast beams (>100 MeV/u)
  - Farthest reach from stability, knockout, Coulomb exictation, nuclear structure, limits of existence, EOS of nuclear matter
- Stopped beams (0-100 keV)
  - Precision experiments masses, moments, atomic structure, symmetries
- Reaccelerated beams (0.2-20 MeV/u)
  - Detailed nuclear structure studies, high-spin studies
  - -Astrophysical reaction rates

# **The Reach of FRIB**

![](_page_23_Figure_1.jpeg)

Estimated Possible: Erler, Birge, Kortelainen, Nazarewicz, Olsen, Stoitsov, to be published

Based on a study of EDF parameters

Known – isotopes with at least one excited state known

Up to Z=90 FRIB will be able to make >80% of all possible isotopes

![](_page_23_Picture_6.jpeg)

FRIB

# **Gas Stopper**

- R&D Program lead by ANL and MSU
- Technical Specifications
  - 3 complementary stopping stations and 2 momentum compression lines specifically optimized
  - -Two Linear gas stoppers (ANL, MSU) » L = 1.5 m, p < 300 mbar » I <  $10^8/s$ , T<sup>1/2</sup> > 100ms
  - Cyclotron gas stopper for light and medium heavy isotopes (NSF Funded)
     » B<sub>max</sub> = 2.3T, r<sub>inj</sub> = 0.95, p<sub>He</sub> = 50-250 mbar

» I > 10<sup>8</sup>/s, T<sub>1/2</sub> < 50ms

 Solid stopper for special elements and high beam rates

» Example: <sup>15</sup>O, I >10<sup>10</sup>/s

Cryogenic

#### Overview FRIB Reaccelerators, and Experimental Stations

![](_page_29_Figure_1.jpeg)

# **Science-driven Upgrade Opportunities**

- Space available for various upgrade options
  - Higher energy
  - ISOL targets

FRIE

- Light ion injector (17 or 200 MeV/u)
- Multi-user simultaneous operation
- Tunnel penetration locations identified in facility design

# FRIB On Track, Moving Toward Construction

<ul> <li>Conceptual design</li> </ul>	completed 9/2010 (CD-1)
<ul> <li>Preliminary design         <ul> <li>CD-2/3A (civil) review in April 2012</li> </ul> </li> </ul>	2010-2012
<ul> <li>Civil construction begins         <ul> <li>Pending DOE approval</li> </ul> </li> </ul>	2012
<ul> <li>Final design         <ul> <li>CD-3B (technical) review in 2013</li> </ul> </li> </ul>	2012-2013
<ul> <li>Technical construction begins</li> </ul>	2013
<ul> <li>Early project completion</li> </ul>	2019
<ul> <li>Project completion</li> </ul>	2021
<ul> <li>Total project cost</li> </ul>	\$680M (\$585 Federal)

![](_page_31_Picture_2.jpeg)

![](_page_31_Picture_4.jpeg)

## FRIB Site Ready for Civil Construction to Begin

![](_page_32_Picture_1.jpeg)

- Utility relocation and site preparation continue on schedule; substantially completed in April, final completion in December 2012
- Pictured above, installation of underground electrical and communication concrete-encased duct bank including new vaults (left), and installation of class II sand backfill at new steam tunnel (right)

![](_page_32_Picture_4.jpeg)

# **FRIB Users Organization**

![](_page_33_Picture_1.jpeg)

- Users are organized as part of the independent FRIB Users Organization
  - FRIBUO has 1227 members (92 US Colleges and Universities, 10 National Laboratories, 53 countries) as of 16 April 2012
  - Chartered organization with an elected executive committee (Chair is Michael Smith, ORNL)
  - FRIBUO has 20 working groups on experimental equipment
- Science Advisory Committee
  - Review of equipment initiatives (Feb. 2011)
  - Review of FRIB Integrated Design (March 2012)
- Low-Energy Community Meeting with NS2012 at ANL 17-18 Aug.

#### Join at fribusers.org (and fribastro.org)

![](_page_33_Picture_11.jpeg)

August 2011 Joint Users Meeting 284 participants

![](_page_33_Picture_16.jpeg)

# Why is it called FRIB ???

![](_page_34_Picture_1.jpeg)

**1.** frib 17 up, 6 down

birf spelled backwards

2. frib 4 up, 12 down

A word that can be used to describe happiness, joy etc. Commonly replaces 'wow', 'cool' or 'great'.

![](_page_34_Picture_6.jpeg)

# Summary

- FRIB will allow production of a wide range of isotopes
  - Extend our searches for the limits to nuclear stability
  - Answer key questions on the nature of the universe (chemical history, mechanisms of stellar explosions)
  - Opportunities for the tests of fundamental symmetries
  - Potential for important societal applications
- The unique features of FRIB
  - High power linear accelerator 400 kW
  - In-flight production and separation providing stopped and reaccelerated beams of elements difficulty to get from ISOL techniques

![](_page_35_Figure_9.jpeg)
